Dr. Saul Spiegelman
Dept. of Bacteriology
Washington University School of Medicine
St. Louis, Mo.

Dear Saul

Received your yeast strains in good condition except for
Ma which had piled up alot of gas which nearly blew out
the agar when I opened the tube. I got it out all right.

I thought you told me that you could distinguish fermentative
mutants on EMB agar. I put Ma and ma on maltose EMB and
found that neither of them grew well enough to form distinguish-
able colonies.

Who's wrong?

Best regards,
Yours sincerely,
